FOR IMMEDIATE RELEASE:

**Codejock Releases ToolkitPro and SuitePro 2009 Vol.2 for Visual C++ and ActiveX**

*This release introduces many stability and usability enhancements for all components. Additionally, the Ribbon received three new themes and a pinnable recent file list. The Report added an icon view, excel-like formulas and expandable columns. And calendar received many new features such as read-only mode and ownership mode.*

MORRICE, Michigan, June 16, 2009 – Codejock a leading provider of modern user interface components, today announced the release of Toolkit Pro 2009 vol.2 for Visual C++ MFC and Suite Pro 2009 vol.2 for ActiveX COM. This release provides a comprehensive set of fully customizable user interface components for use with Visual C++ MFC and ActiveX COM development.

This release incorporates many new features and enhancements including:

**Pinnable Recent File List**

A Recent File List or MRU is used to display a recent list of opened files in a ribbon or commandbars popup menu. The new MRU can be used in a pinned (Office 2007 style) or non-pinned style. When using a pinnable MRU the user can pin the item so that it always remains in the list as new items are added.

**Office 14 Style Themes**

The ribbon can now use the Office 14 style "white" and "scenic" themes. With these new themes you can be sure that your application is sporting the latest and greatest look. A new "System" theme has been added in addition to the Office 14 style themes.

**Excel-like Report Calculations**

With Excel-like formula support the report can calculate the sum of all rows or a subset of rows and display results in the item's caption.

**Space Saving Expandable Columns**

Expandable columns will have an arrow button in the column header which allows the column width to be expanded to the width of a pre-determined amount of columns.

**Report Icon View**

Icon View is a view similar to the Icon View in Windows Explorer. The report can switch to Icon view from normal view allowing each row to be represented by an icon and some text.

**Read-Only Calendar**

The Calendar now supports a Read-Only mode. This allows users to view all the data in the calendar without allowing them to modify the appointments.

A complete list of all new features can be found in the release notes for each product located on the company's website, [www.codejock.com](http://www.codejock.com).

### **About Codejock**

Codejock Technologies, LLC is based in Morrice, Michigan and provides reusable software components to enhance the user interface of Windows Desktop Applications. Codejock components help to facilitate rapid software development using Visual C++ MFC, ActiveX COM and .NET technologies.
